PROFESSIONAL SUMMARY

Product-minded technologist with hands-on experience owning data products end-to-end — from identifying business problems and gathering stakeholder requirements to designing solutions, building pipelines, and delivering measurable outcomes. Currently managing a production data product at USU Transforming Communities Institute serving 220 clients and Utah Supreme Court reporting needs. Strong foundation in Python, SQL, and machine learning, with a genuine passion for fintech, AI-native products, and building things that create real business impact. MS in Management Information Systems at Utah State University (graduating May 2027). Authorized to work in the US on F-1 OPT (3-year STEM OPT available upon graduation).

SKILLS

Product: Requirements gathering, roadmap thinking, stakeholder management, data-driven decision-making, 0-to-1 product building, iterative problem solving

Technical: Python (Pandas, NumPy, Scikit-learn, XGBoost, pyairtable), SQL, REST API integration, ETL pipelines, AWS EC2, GitHub Actions, Power BI

AI & ML: Advanced Machine Learning, XGBoost, LLM integration (Groq Llama 3), Databricks (Fundamentals, 100% score), AI workflow automation

Domain: Fintech (FinTech coursework, trading systems), payments data, data governance, institutional reporting

Tools: Airtable, Softr, Git/GitHub, SPSS, Claude AI (daily use for product and analytics workflows)

EXPERIENCE

Graduate Data Analyst (Product Owner — Data)

Apr 2026 – Mar 2027

Transforming Communities Institute, Utah State University | Logan, UT

- Owned end-to-end lifecycle of a data product serving 220 clients — gathered requirements from the Executive Director, defined the data architecture, built the pipeline, and delivered analysis-ready outputs that directly inform Utah Supreme Court institutional reporting
- Identified a critical business problem (manual, error-prone data exports), designed a scalable automated solution integrating five data sources via REST API, and shipped to production — reducing reporting time from days to minutes with 2,921 output columns
- Drove continuous iteration based on stakeholder feedback — fixed 21 coded field mismatches, resolved Unicode encoding bugs, and rebuilt the output schema to match exact analytical requirements
- Authored comprehensive data dictionary and codebook serving as standalone product documentation — enabling non-technical stakeholders to self-serve on data definitions and analytical outputs

Teaching Assistant, Cloud Computing

Dec 2025 – Apr 2026

Utah State University, Jon M. Huntsman School of Business | Logan, UT

- Translated complex cloud infrastructure concepts (AWS EC2, S3, IAM, DynamoDB) into accessible explanations for diverse student audiences — building the communication and simplification skills core to product work
- Identified recurring student pain points and proactively created supplementary materials to address gaps — iterative improvement driven by user feedback

Power BI Analyst

Jan 2024 – Mar 2024

Medikart Pharmaceutical Distribution | India | Internship

- Identified that leadership was spending significant time on manual Excel reporting — proposed, designed, and delivered an automated Power BI dashboard solution that reduced reporting time by 40%
- Worked directly with business stakeholders to understand reporting needs, define KPIs, and translate requirements into dashboard features — full product discovery to delivery cycle

SAP Materials Management Intern

Jun 2024 – Aug 2024

Tata Motors Ltd. | Pimpri Chinchwad, India | Internship

- Analyzed procurement data at enterprise scale within SAP MM — identified purchasing workflow inefficiencies across a multi-thousand SKU pipeline at one of India's largest manufacturers

PRODUCT & TECHNICAL PROJECTS

AI-Powered Stock Trading System — 0 to 1 Product Build | Python, XGBoost, AWS EC2, Groq Llama 3, SEC EDGAR API, Alpaca API

- Identified a gap in retail investor decision-making, defined success metrics, and shipped a fully automated pipeline on AWS EC2 — integrating SEC 10-K filings, LLM sentiment scoring, quantitative signals, and XGBoost predictions with automated paper trade execution via Alpaca API
- End-to-end product ownership: problem identification, solution design, build, deploy, monitor — daily automated execution with logging and error handling

FinTech Loan Default Risk Model | Python, Scikit-learn, XGBoost, Pandas, SHAP

- Built ensemble ML models to predict loan default probability — applied feature engineering, cross-validation, ROC-AUC, and SHAP analysis. Framed findings as actionable credit risk recommendations for non-technical stakeholders

Housing Price Predictive Analytics — 335 US Cities | Python, Regression Modeling, Pandas, Data Visualization

- Integrated multi-source socio-economic datasets across 335 US cities — identified pricing patterns, growth signals, and investment insights. Presented findings as a clear, actionable data narrative rather than raw model output

EDUCATION

Utah State University, Jon M. Huntsman School of Business

Logan, UT

MS, Management Information Systems

Aug 2025 – May 2027

Relevant Coursework: Advanced Machine Learning, FinTech & Computational Methods, Database Management, Advanced Python for Analytics, Cloud Computing

Savitribai Phule Pune University (NBSSOE)

Pune, India

BE, Information Technology | First Class with Distinction | CGPA: 8.09

Aug 2023

CERTIFICATIONS

Databricks Fundamentals Accreditation

Jun 2026

Databricks Academy | Score: 100%

LEADERSHIP

President, USU AI Club

Aug 2025 – Present

Utah State University | Logan, UT

- Drive vision and strategy for USU's AI community — organize Python, ML, and AI workshops, connect students with industry professionals, and build a culture of applied learning and technical curiosity
